Based upon the presence of a XhoI site followed by a run of 14 or
more T residues at the beginning of the sequence, this clone was
polyadenylated. The resulting Poly-T sequence has been removed.

* NOTE: This record contains 171 individual

* sequencing reads that have not been assembled into

* contigs. Runs of N are used to separate the reads

* and the order in which they appear is completely

* arbitrary. Low Pass sequence sampling is useful for

* identifying clones that may be gene-rich and allows

* overlap relationships among clones to be deduced.

* However, it should not be assumed that this clone

* will be sequenced to completion. In the event that

* the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0224: gap of 100 bp 10879: contig of 655 bp in length 10879: gap of 100 bp 11563: contig of 684 bp in length 1763: gap of 100 bp 12433: contig of 670 bp in length 12209: contig of 670 bp in length 13209: contig of 676 bp in length 1399: gap of 100 bp 100

It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 8 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Quality coverage: 6.8 in Q20 bases; agarose-fp Quality coverage: 7.0 in Q20 bases; sum-of-contigs

                             The present invention relates to a transgenic Brassica plant or its seed, cells or tissues, characterised by harbouring a specific transformation event, particularly by the presence of a male-sterility gene, at a specific location in the Brassica genome. Transgenic transgenic plant with a male-fertile Brassica plant and harvesting the hybrid seed from the transgenic Brassica plant.

The present sequence is PCR primer MLD008 used to amplify a fragment of plasmid pTColl3. The primer MLD008 used as a probe. The amplified plasmid pTColl3. The primer is also used as a probe. The amplified Bacillus amyloliquefaciens and promoter region of the anther-specific gene TA29 from Nicotiana tabacum. This primer corresponds to position 4697-4717 of plasmid pTColl3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Plasmid pTA2983 was constructed subcloning a clai fragment contg. the TA29 gene from lambda TA29 into pLK31. The TA29 promoter is used in a vector for transforming plant cells. Tag b is the coding sequence of the

One of the plants has an expression cassette comprising a male-sterility gene, and the other plant has an expression cassette comprising a fertility restorer gene, integrated into the genome. The fertility restorer gene is capable of preventing the activity of the male-sterility gene. The plant pair is useful for producing hybrid seed. Plants developed from the hybrid seed have agronomate performance, genetic stablility and adaptability to different genetic backgrounds. The present sequence represents a fertility restorer gene. The plasmid comprises the barstar gene, which acts as plants of the invention.
                                                                                                                                                                                                                                                                                                              Transgenic winter oilseed rape plants suited for producing hybrid seed with improved qualities, comprises a male-sterility gene and fertility restorer gene, integrated into the genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

```
Plasmid pTHW107 is a vector carrying T-DNA (AAT59531) comprising a barnase coding sequence under control of the tobacco TA29 gene stamen-specific promoter and a phosphinothricin acetyltransferase coding sequence under control of an Arabidopsis Rubisco small subunit gene promoter. Oilseed rape hypocotyl explants were infected with Agrobacterium tumefaciens C58ClRif carrying vector
Transgenic plant; poly-(ADP-ribose) polymerase inhibitor; PARP; niacinamide; Agrobacterium; T-DNA; male sterile; barnase; ribonuclease; RNase; cereal; wheat; oilseed rape; Brassica napus;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /label= 3'97

The specification describes a pair of transgenic winter oilseed rape plants suited for producing hybrid seed. One of the plants has an expression cassette comprising a male-sterility gene, and the other plant has an expression cassette comprising a fertility restorer gene, integrated into the genome. The fertility restorer gene, preventing the activity of the male-sterility gene. The plant pair is useful for producing hybrid seed. Plants developed from the hybrid seed have agronomic performance, genetic stability and adaptability to different genetic backgrounds. The present sequence represents plasmid pTHW107. This plasmid comprises the barnase gene, which acts as a male-sterility gene. The plasmid is used to create transgenic plants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Transgenic winter oilseed rape plants suited for producing hybrid seed with improved qualities, comprises a male-sterility gene and fertility restorer gene, integrated into the genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       T-DNA; plasmid pTCO113; transgenic Brassica plant; transformation event; male-sterility gene; chimeric; tobacco; ds.
plasmid pTCO113 (AAT39339) is a T-DNA vector containing a bar gene under control of the PSSU promoter, a barnase gene under control of the stamen-specific PTA29 promoter, and a barstar (co-regulatory) gene under control of the Pnos promoter. 87% of oilseed rape plants regenerated after Agrobacterium-mediated transformation using pTCO113 were male sterile. Barnase expression disturbed the function of stamen cells leading to male sterility. Constitutive expression of barstar counteracted any low level expression of barnase in non-stamen tissue.
                                                                                                                                                                                                                                                                                                                                                            Gaps

The present invention relates to a transgenic Brassica plant or its seed, cells or tissues, characterised by harbouring a specific seed, cells or tissues, characterised by harbouring a specific transformation event, particularly by the presence of a male-sterility gene, at a specific location in the Brassica genome. Transgenic transgenic plant with a male-fertile Brassica plant and harvesting the transgenic plant with a male-fertile Brassica plant and harvesting the hybrid seed from the transgenic Brassica plant.

The present sequence is chimeric T-DNA of plasmid prCOll3. This sequence comprises right border repeat, left border repeat and 3' untranslated region (UTR) from TL-DNA of priB653, synthetic polylinker sequences, coding regions of bialaphos resistance gene from Bacillus amyloliquefaciens and promoters of atsia and barstar gene from Bacillus amyloliquefaciens and promoters of atsia rabidopsis thallana, the anther-specific gene from Arabidopsis thallana, the anther-specific gene from the T-DNA of pri137 of Agrobacterium tumefaciens.
                                                                         Transgenic Brassica plants, seeds, cells or tissues, characterized by harboring specific transformation events, particularly by presence of male-sterility gene, at specific location in its genome -

                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                   The invention relates to a chimeric live, infectious, attenuated virus comprising a yellow fever virus with the nucleotide sequence encoding a prive protein deleted, runcated or mutated so that functional yellow fever virus prive. Forcien is not expressed and also integrated into the genome of the yellow fever virus a nucleotide sequence encoding a prive protein of a second, different flavivirus so that the prive protein of the second flavivirus is expressed. The chimeric live, infectious, attenuated virus is used to prepare medicaments for preventing or treating flavivirus infection in a patient. The yellow fever virus vector produces its gene product (tumor antigen or cytokine) in cells of the lymphoid or reticulcendothelial system or in a precursor of these systems in patients with cancer. Plaviviruses replicate in the cytoplasm of cells on that the virus replication does not involve integration of the viral genome into the host cell. The present sequence represents a DNA fragment

The derivative is designated PDK-53. The polyprotein comprises the capsid, prw, M. E. NSI, NS2A, NS2B, NS3, NS4A, NS4B and NS5 proteins. The PDK-53 viral sequence may be used in the production of a quadravalent vaccine which provides immunity against all four serotypes of dengue virus. The vaccine also comprises a all four SETOTY a chimeric DEN-2/4 virus. The new quadravalent vaccines are used to protect against infection by all four serotypes of dengue virus, DEN-1, DEN-3 and DEN-4, which can lead to dengue fever or fatal dengue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             used to produce the recombinant protein products of the DNA constructs which are used in the vaccines.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence encodes the polyprotein from Dengue 2 virus, strain 16681. The polyprotein comprises the capsid, prM, M, E, NSI, NS2A, NS2B, NS3, NS4A, NS4B and NS5 proteins. A clone of this wildtype viral sequence, pK4A, NS4B and NS5 production of a quadravalent vaccine which provides immunity against all four serotypes of dengue virus. The vaccine also comprises a chimeric DEN-2/1 virus, and/or a chimeric DEN-2/4 virus, and/or a chimeric DEN-2/4 virus, and/or a chimeric DEN-2/4 virus, The new quadravalent vaccines are used to protect against infection by all four serotypes of dengue full are used to produce fever or cells are used to produce fever or cells are used to produce the recombinant protein products of the DNA constructs which are used in the vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PDK-53, a clone of infectious attenuated Dengue 2 virus strain 16681 - also chimeric DEN-2/1, DEN-2/3 and DEN-1/4 viruses, used as a quadravalent vaccine for protecting against Dengue virus infection
              CDNA sequence encoding polyprotein of DEN-2 virus, strain 16681.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 10723;

The present invention describes immunogenic portions of lung tumourassociated proteins (I) and the nucleic acids (NAs) that encode them. (I) have cytostatic activity and can be used in gene therapy, antisense inhibition and in vaccines. The NAs and the lung tumour-associated diagnosis of diseases associated with their inappropriate expression, especially lung cancers. For example, the NAs may be administered to concers, and the protein by expressing inactive proteins and patient's genome that affect the activity of the protein by expressing inactive proteins or to supplement the patients own production of (I). Additionally, the NAS may be used to produce the lung tumour associated protein, according to standard recombinant DNA methodology. Conversely, antisense NA conformative sequences down genes and preventing their expression by binding with the cells own genes and preventing their expression. The NA cancer. The (I) may be used as antigens in the production of smillar NA sequences in cancer. The (I) may be used as antigens in the production of antibodies and in assays to identify medulators (agonists and antagonists) of the expression and activity of the protein. ARF68083 to AAF6808 and nucleotide and protein sequences which are used in the exemplification of the need of the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

AAT14564 encodes human milk kappa-casein which is useful as a component of an enteral nutritional product. Kappa-casein has anti-rotaviral activity, it inhibits the attachment of human rotavirus to mammalian cells. The kappa-casein is useful in the treatment and prevention of onset of gastroenteritis and other diarrhoeal diseases caused by rotaviridae esp. in infants, children or immunodeficient patients. Kappa-casein appeared to have no side effects on the subjects treated and is unlikely to be toxic or cause an allergic reaction.
                                                                                                                                                                                                                                                                                                                                                                                           Kappa-casein used as anti-rotaviral infection agent in nutritional product - to prevent, retard or treat rotavirus infection, especially in infants, children and immuno-deficient patients

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The recombinant human kappa casein is produced in high yields by means of either a eukaryotic or prokaryotic expression system. It is used as a nutrient supplement in milk based products to provide a substantial improvement of the nutritional and biological value of the formulae, making it closer in similarity to human milk. It can also be used as a pharmaceutical.

                                                                                                                                                                           A commercial cDNA library prepd. in lambda gtll from mRNA obtd. from human breast tissue removed during the third trimester of pregnancy was screened with rabbit anti-bovine kappa-casein cDNA. The cDNA insert of a recombinant phage was amplified by PCR. The sequence of an isolated full-length clone encoding human kappa-casein (AAR72696) is given in AAQ89598.
                                                                                                                         DNA encoding human kappa-casein - used for the prodn. of large amts. of highly purified kappa-casein milk protein for infant use.
                                                                                                                                                                                                                                                                                                            Gaps

AA221093 to AA221102 encode new human secreted proteins and AAY29861 to
CC AAY29873 represent the secreted proteins encoded by the polynucleotide
CC Sequences. AA221102 to AA221112 represent probes for the secreted
CC proteins. The polynucleotides and proteins are predicted to have
CC proteins are polynucleotides and proteins are predicted to have
CC proteins are meliorating medical conditions in humans and animals,
CC although no supporting data is given. Suggested activities include
CC although no supporting activity, cytokine and cell proliferation/differentiation
CC although no supporting (e.g. as vaccines) or suppressing activity,
CC activity, immune stimulating (e.g. as vaccines) or suppressing activity,
CC activity, chemctactic/chemokinetic activity, haemostatic
CC and thrombolytic activity, receptor/ligand activity, and tumour
CC activity, cadherin/tumour invasion suppressor activity, and tumour
CC and thrombolytic activity. The polynucleotides and proteins can also be used
CC and no activity. The polynucleotides and proteins can also have utility
CC and no activity. The polynucleotides and proteins can also have utility
CC and no activity where as a carbon source, use as a nitrogen
CC and no activity as as a source of carbohydrate. They may also have utility
CC insume growth or regeneration, as well as for wound healing and tissue
CC repair and replacement, and in the treatment of burns, incisions and
CC circumstances where bone is not normally formed, have application in
CC the healing of bone fractures and cartilage damage or defects in humans
CC and other animals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1, Application US/08817188

Patent No. 6074876

GENERAL INFORMATION:

APPLICANT: DE BLOCK, MARC

TITLE OF INVENTION: GENETIC TRANSFORMATION USING A PARP INHIBITOR

FILE REFERENCE: 2121-0127P

CURRENT APPLICATION NUMBER: US/08/817,188

CURRENT FILING DATE: 1997-05-15

EARLIER APPLICATION NUMBER: PC7/EP96/03366

BARLIER FILING DATE: 1996-07-31

EARLIER FILING DATE: 1996-07-31

EARLIER FILING DATE: 1996-07-31

SARLIER PLING DATE: 1996-07-31

EARLIER PLING DATE: 1996-07-31
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    LOCATION: Complement((97)..(330))
OTHER INFORMATION: 3'97: 3' untranslated region containing the
OTHER INFORMATION: polyadenylation signal of gene 7 of Agrobacterium
OTHER INFORMATION: T-DNA

MAME/KEY: misc_feature
LOCATION: Complement((2658)..(3031))

OTHER INFORMATION: 3' nos: 3' untranslated region containing the
OTHER INFORMATION: polyadenylation signal of the nopaline synthase
OTHER INFORMATION: gene of Agrobacterium T-DNA
FEATURE:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    OTHER INFORMATION: Description of Artificial Sequence: T-DNA of OTHER INFORMATION: plasmid pTHW107

Patent No. 5712250
GENERAL INFORMATION:
APPLICANT: MUKET]1, P.
APPLICANT: Seo, A. E.-Y.
APPLICANT: Cummaings, R.D.
TITLE OF INVENTION: Product for Inhibition of Human Rotavirus Infection.
NUMBER OF SEQUENCES: 2
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NAME/KEY: CDS
LOCATION: 45...593
LOCATION: 45...593
LDENTIFICATION METHOD: DNA sequencing and restriction analysis
OTHER INFORMATION: The encoded product of nucleotide SEQ ID NO: 1:

Jr., Moore, D.T., Bouffard, G.G., Beckstrom-Sternberg, S.M., Touchman, J.W., Bonaldo, M.F. and Soares, M.B.
The NIEHS Xenopus maternal EST project: interim analysis of the first 13, 879 ESTs from unfertilized eggs
approaches to facilitate gene discovery', Genome Research 6:791-806, 1996. The first strand synthesis used a NotI-dT18 primer; double stranded cDNas were ligated to ECORI adapters, digested with NotI, and directionally cloned into the NotI and ECORI-digested pT773-Pac vector. The library contained approximately 7.2 x 10^5 recombinants, with average insert sizes of I-1.5 kb."

lacyis eggs. The library was constructed in the vector py773-pac as described in Bonaldo, M.F., Lennon, G. and Soares, M.B. 'Normalization and subtraction: two approaches to facilitate gene discovery', Genome Research 6.791-806, 1996. The first stranded cobnaw were ligated to NotI-dT18 primer; double stranded cDNax were ligated to EcoRI adapters, digested with NotI, and directionally cloned into the NotI and EcoRI-digested pT773-pac vector. The library contained approximately 7.2 x 10°5 at 126 c 128 g 144 t
